Abstract. In the modern time, a significant part of the information space is occupied by scientific and technical information and information about articles published in prestigious scientific journals. During the information age, global recognition of the scientific results of each researcher and their recognition by the academic community has become one of the key requirements of our time. It should be noted that the relevance of not publishing scientific works of researchers in our country in the leading publications of the world is associated with the presence of gaps in this area. Obviously, thousands of journals are now published in the world, and influential scientists only follow those published in well-known scientific databases. Such databases, firstly, include an international scientific database, such as the Web of Science, which follows and assesses over ten thousand journals, and Scopus, which follows and assesses thirty thousand journals. Publication of scientific works in journals included in these scientific databases is one of the key factors determining the level of authors of articles, as well as the institutes and universities in which they work, the scientific reputation of their country and, finally, the level of development of the country. In some cases, refusal to accept documents in highly indexed publications is due to our lack of preparation and presentation of valuable results in accordance with the highest standards, as well as due to lack of experience in this area. In view of these problems, this article presents the problems of publishing scientific results in authoritative scientific journals, related problems, the development of a manuscript, the presentation of an article and the main points that a researcher should pay attention to when choosing a scientific journal. In addition, there are certain requirements for scientific publications and the writing and preparing of high-quality research in modern standards and in the form of concise and full-fledged those are available to the attention of readers.
